

Decision-making processes in the field of land conservation

Every year more than 100 km² of land are taken for housing, industry, transport, etc. These long-term changes are difficult or costly to reverse, and nearly always involve trade-off between various social, economic and environmental need. Therefore decisions - individual administrative on land protection is very sensitive and must take into account several aspects: EU and Slovak environmental policy and legislation, effectiveness of land use, deployment of activities on land, etc. All aspects need to be putting to the proportion in order to achieve sustainable land use.

Impacts of workshop :

- to provide professional training related to decisions on land use
- to provide high quality of decisions- individual administrative acts that respect all aspects of the land protection

Target Group:

- target group of project (PhD. students, post-doc, young researches to 35 years, teachers, researchers, professional groups
- speaker: experts from states administration
